Target Audience

: can use this tool

Freelance Developers **can use this tool**

Software Developing Teams **can use this tool**

Feature List

Must Have Features

Show Project Statistics

User Management

Project Timing Management

Collaborators Management

Create Custom Project

Task Board

Email Notification

Backlog Management

Project Progress Indicator

Scrum Methodology Support

Meeting Time Setting

Create Custom Sprint

Should Have Features

Auto Change Task's State By Commit Messages

Connect To Project Git Repository

Get Repository Stats

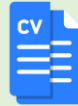

Show Developer Profile And Contributed Projects

Could Have Features

Show Developer CV In Profile

Project Notification (Email, App)

Virtual Conference Room

Show Project History Based On Git

Multi Methodology Support

Time Tracking Gadget

Velocity Calculation In Methodologies

Vote In Conference Room

Vote For Meeting Times And Other Sprint Settings

Won't Have Features

We Are No DevOps App

We are not developing a tool which provides remote git repo or with git commands support

We Are Not C2C

We are not developing a tool which supports any financial agreement between managers and developers through itself

Added Values

CV Support

Developers can make their own cv to help project owners pick developers with sufficient skills for the project.

Also we give a report of the developers activity in projects previously contributed.

Conference Room

We make communication and teamwork easier with a virtual conference room which in first phase it may not be included

Multiple Methodologies

You can use various software development methodologies (agile, Kanban, scrum, waterfall)

*in the first phase only scrum and waterfall are supported

Easier Project Managing

We make it easier by automating some project actions and we provide a complete tutorial which may help people with minimal understanding of methodologies

Iranian Project Management Tool

We support Persian language. This type of tool is unique in Iranian similar tools and it can be called a first to market product.

Internal & sanction-proof

Most of the similar products have already sanctioned Iranian users and also Iranians have problem with the others' payment methods.

Human Risks

Rainy Days

There would be a huge load of projects and exams after holidays and the predefined weekly hours may not be devoted

Holidays

Gathering and setting scrum troubles meetings would make some serious obstacles in project progress

Technical Risks

Git Remote Sites' API

After what happened to other free public APIs there would be a slight probability of sites like github, gitlab, ... API be no longer free.

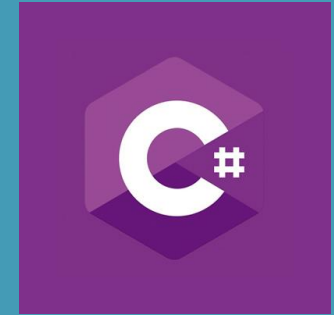

Deployment On Server

Low understanding of this matter and also claiming a normal VPS Server would make some trouble.

Technologies Stack

There are some technologies which are recently released and lack of documents and limitation of support would be a risk for the next phases and not defined features.

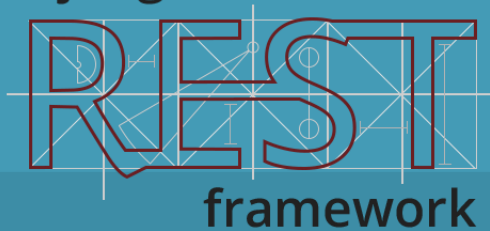

Team Members Skills

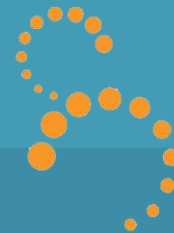

Technology Stack
